13th SDL Forum Call for Papers

Design for Dependable Systems

18th September to 21st September, 2007, Paris, France

<http://www.pragmadev.com/sdl07>

The SDL Forum is held every 2 years and is one of the most important events in the calendar for anyone involved in System Design Languages and modelling technologies. It is the primary conference event where the evolution and use of these languages is discussed. The 13th SDL Forum will be held during the third week of September 2007. It is hosted at ENST (Ecole Nationale Supérieure des Télécommunications) in Paris, locally organized by PragmaDev and sponsored by France Telecom.

The SDL Forum Society that runs the Forum is a non-profit organization established by language users and tool providers to promote the Specification and Description Language and related System Design Languages, to provide and disseminate information on the development and use of the languages, to support education on the languages and to plan and organize the "SDL Forum" series and events to promote the languages.

Objectives

Complexity in IT systems is growing rapidly and quality with reliability is ever more a priority. As UML is applied to real systems, the inherent ambiguity from allowed "semantic variations" in UML has raised an increasing need for profiles based on formal languages such as ITU-T Specification and Description Language. The ongoing standardization by the ITU-T of a UML profile based on the ITU-T Specification and Description Language demonstrates that need, and that is why the SDL2007 conference focuses on "Design for Dependable Systems".

The SDL Forum addresses issues related to the modelling and analysis of reactive systems, distributed systems and real-time and complex systems such as telecommunications, automotive, aerospace and web-based applications. The conference programme will include:

- presentations from invited speakers
- presentations of research papers
- tool demonstrations and posters
- tutorials
- presentation of industrial experiences
- networking opportunities

The intended audience includes users of modelling techniques in industrial, research and standardization contexts, as well as tool vendors and language researchers.

The SDL Forum Society is accredited by ITU-T as an organization contributing to the System Design Language standards, and the timing of the 13th SDL Forum has been chosen to be an opportunity to forward issues to related ITU-T meetings scheduled for the following week.

Topics

The aim of the forum is to anticipate and influence the future trends and to focus on issues that are important to its expected delegates. Authors are therefore invited to submit papers on topics related to System Design Languages including but not limited to:

- **Design for Dependable Systems:** model translation, exhaustive simulation techniques, methodology, new language constructs and semantics, profiling; evaluations of languages/notations; time, performance, security, and other non-functional aspects.
- **Industrial application reports:** Classical application areas such as telecommunication; emerging application areas such as automotive, aerospace, hardware, Web-centric; new telecommunication contexts; specification, implementation, verification and validation of real time and distributed systems.
- **Promoting System Design Languages:** Teaching, learning and describing the languages; standardization; integration of and relations between standards; methodology for the use of the languages.
- **Integration of System Design Languages in theory and in tools:** Use of models in a formal way; combined use of different System Design Languages; language and notation interoperability; integration of supporting tools.
- **Model-driven development:** Model-based systems engineering; analysis and transformation of models; reuse approaches; verification and validation of models; systematic testing based on and applied to models.

Submissions

Submissions should be previously unpublished, written in English, no longer than 16 pages (including the illustrations and bibliography) and using the LNCS style as described on <http://www.springer.com/lncs>. Submission will be done in electronic form via <http://www.pragmadev.com/sdl07>. Acceptable file formats for initial submission are PDF (preferred) and PostScript (compressed). The proceedings being published by Springer as a book in the well-known Lecture Notes in Computer Science (<http://www.springer.com/lncs>) series, which includes SDL2001, SDL2003, and SDL2005.

New extended deadlines :

May 15 th , 2007	Paper Submission
June 15 th , 2007	Notifications to Authors
June 30 th , 2007	Final Copy from Authors
September 18 th to September 21 st , 2007	Conference

Accepted papers must be presented at the conference by one of the authors.
